IDENTIFIERS Alberta

ABSTRACT

A study was conducted whose primary aim was to identify and explain additional costs incurred by Alberta, Canada school jurisdictions providing second language instruction in 1980. Additional costs were defined as those which would not have been incurred had the second language program not been in existence. Three types of additional costs were identified: instructional, ancillary, and developmental. Costs were analyzed according to the following dimensions: second language (French, Ukrainian, German), program type (extended, bilingual, immersion), program stage (development, implementation, maintenance), instructional level (elementary, junior high, senior high), school size (small, medium, large) and school setting (urban, rural). Information was collected by means of a questichnaire and interviews with school board officials. Data were compiled and analyzed according to the dimensions detailed above. Although questionnaires were mailed to the 23 school jurisdictions offering second language instruction in Alberta, the findings are based on the detailed analysis of five boards which were selected as providing a good cross section of all study dimensions. The study revealed considerable diversity among programs both within and among boards with respect to staffing patterns (pupil-teacher ratio), ancillary services provided, and developmental effort expended. The findings raised a number of issues meriting further investigation. (Author/PJM)

December 7, 1979

Dear Dr. Thiessen:

In late May, 1979, Deloitte Haskins & Sells Associates was commissioned to undertake a study of additional costs of second language instruction in Alberta. The study was completed in late November, 1979.

The study was concerned with identifying additional second language costs incurred by Alberta school jurisdictions in 1978, and with detailing these costs according to the following study dimensions:

- Program type
- · Program stage
- Instructional level
- School size
- · School setting

The report which is enclosed outlines the study purposes, methodology, findings and recommendations. The findings are based on a review of similar studies, questionnaires which were mailed to twenty-three school jurisdictions, interviews with second language administrators, and analysis of the data obtains

.../2

The partners and staff of Deloitte Haskins & Sells Associates appreciate the opportunity to cooperate with Alberta Education in completing this important study. We are confident that our report will be of continuing use in assisting the Department in connection with second language program funding.

Delaille Hashins + Sells Hosociakes

Yours very truly,

ABSTRACT

The primary purpose of the study was to identify and explain additional costs incurred by Alberta school jurisdictions providing second language instruction in 1978. Additional costs were defined as those which would not have been incurred had the second language program not been in existence. Three types of additional costs were identified: instructional, ancillary, and developmental. Costs were analyzed according to the following dimensions: second language (French, Ukrainian, German), program type (CORE, EXTENDED, BILINGUAL, IMMERSION), program stage (development, implementation, maintenance), instructional level (elementary, junior high, senior high), school size (small, medium, large), and school setting (urban, rural).

Information was collected by means of a questionnaire and interviews with school board officials. Data were compiled and analyzed according to the dimensions detailed above. Although questionnaires were mailed to the twenty-three school jurisdictions offering second language instruction in Alberta, the findings are based on the detailed analysis of five boards which were selected as providing a good cross section of all study dimensions.

The study revealed considerable diversity among programs both within and among boards with respect to staffing patterns (pupils/teacher), ancillary services provided, and developmental effort expended. The findings raised a number of issues meriting further investigation.

iv

ACKEOWLEDGEMENTS

We wish to express gratitude to the many educational administrators within school boards involved in this study. Their interest in the study and willingness to cooperate were very important in bringing the study to a successful conclusion.

We are indebted to the members of the Steering Committee for their support and guidance: Dr. Jim Thiessen, Dr. Phillip Lamoureux, Mr. Walter Turch, and Mr. Jacques Moquin. Their assistance throughout the study was appreciated.

We would also like to thank Dr. Douglas Parker of the University of Alberta and Mr. Jim Jones of the Edmonton Public School Board for their helpful suggestions in the development of data collection procedures.

Finally, we wish to acknowledge the assistance provided by our accountants and administrative staff in diligently completing their duties.

6

SUMMARY

PURPOSES

The primary purpose of the study was to identify and explain the additional costs incurred by Alberta school jurisdictions providing instruction in a second language during the calendar year 1978. The specific questions addressed were as follows:

- What are the costs associated with instruction in each of French, Ukrainian and German?
- How do costs vary as a function of program type within each second language (CORE, EXTENDED, BILINGUAL, IMMERSION)?
- What are the costs associated with the stages of program adoption (development, implementation, maintenance)?
- How do costs vary as a result of instructional level (elementary, junior high, senior high)?
- How do costs vary as a result of school size (small, medium, large)?
- a How do costs vary as a result of school setting (urban, rural)?

A secondary purpose of the study was to identify areas where the program accounting procedures maintained by school jurisdictions were inadequate in providing the cost data required in this investigation and to recommend corrective action.

DEFINITIONS

e Program Types

CORE - a program in which the second language is taught as a subject for a period of time comparable to other school subjects.

į

EXTENDED - a program in which the second language is taught as a subject and in addition one other subject (art, music, social studies, etc.) is taught in the second language.

BILINGUAL - a program in which the second language is taught as a subject and two or more other subjects are taught in the second language so that pupils are instructed in the second language up to a maximum of 50% of the time.

IMMERSION - a program in which the pupils are instructed in the second language in excess of 50% of the time.

o Program Stages

DEVELOPMENT - the earliest stage in which a program is developed, curricular and assessment materials are acquired, and additional materials are developed and/or revised to meet the needs of the program.

IMPLEMENTATION - the second stage, in which the program materials which have been developed are field-tested on a system-wide basis by the teachers in the schools.

MAINTENANCE - the final stage in which the program is operating in the schools and requires only minimal assistance to enable it to continue operation.

o Instructional Level

ELEMENTARY - grades 1 through 6.

JUNIOR HIGH SCHOOL - grades 7 through 9.

SENIOR HIGH SCHOOL - grades 10 through 12.

• School Size

SMALL - a school which has fewer than 200 pupils.

MEDIUM - a school which has 200 to 600 pupils.

LARGE - a school which has more than 600 pupils.

8

e School Setting

URBAN - schools located in an urban setting.

RURAL - schools located in a rural setting.

Cost Types

INSTRUCTIONAL - costs associated with providing classroom instruction to pupils.

- Teacher Salaries salaries and fringe benefits.
- Equipment equipment purchased.
- Materials supplies, textbooks and media materials purchased.
- Transportation transportation of pupils to school.

ANCILLARY - costs associated with providing supplementary services which benefit the pupils.

- Special Activities trips, camps, cultural events, etc.
- Professional Development activities designed to enhance a teacher's effectiveness.
- Support Staff resource teachers, teacher aides, testing assistants, language laboratory assistants, counsellors, ext _ consultants.

rce Personnel - research assistants, counsellors, external consultants.

• Supervision - supervisors, consultants, department heads, curricular associates.

DEVELOPMENTAL - costs associated with developing a new program.

- Curriculum acquisition and/or development of curricular materials.
- Assessment development of assessment materials and/or external evaluations.

Additional Costs

Costs which would not have been incurred had the second language program not been in existence.

• Instructional Salaries - the difference between the cost of (a) second language teachers, and (b) additional teachers at average salaries of other programs required to maintain pupil/teacher

ratios, were all second language full-time equivalent pupils to transfer into regular programs.

- Other Instructional those incurred specifically for the second language program.
- Ancillary all incurred specifically for the benefit of pupils in the second language program.
- Developmental all incurred for the development of a second language program.

METHODOLOGY

The study was conducted in two stages. The first stage identified cost types and developed methodological procedures. The primary sources of information were literature on other second language cost studies and the perceptions of second language educators. The second stage consisted of collecting and analyzing the data and determining the additional costs associated with each second language program.

Additional costs are defined as those which would not have been incurred had the second language program not been in existence. Three types of costs were identified: instructional costs incurred in providing class-room instruction to pupils, ancillary costs incurred in providing supplementary services to program pupils and developmental costs incurred in developing a new program. The elements comprising each cost type are:

Instructional	Ancillary	<u>Developmental</u>
Teacher Salaries	Special Activities	Curriculum
Equipment	Professional Development	Assessment
Materials	Support Staff	Other
Transportation	Resource Personnel	
Other	Supervision	

- e Instructional costs are basic to all programs which have reached the implementation stage as they represent the cost of the teacher, the instructional materials necessary to present the curriculum, and the cost of transporting, where necessary, the pupils to the teacher. All second language program teacher costs are not classified as additional. The other elements included under instructional costs are all considered additional if they are provided specifically for a second language program without benefit to non-program pupils.
- Ancillary costs are all additional as they would not be incurred without the existence of the program. The supplementary services they represent are provided specifically for a particular program. These costs are discretionary in that the related services are not essential in offering a program; whether or not they are provided depends on their need as perceived by the school board.
- o Developmental costs are all additional as they are incurred for the development of a particular program. Their magnitude is dependent on the variety and extent of the developmental effort expended in initiating a program.

Once the cost types were identified, a questionnaire was designed to elicit information about the costs incurred by school jurisdictions operating second language programs. A draft questionnaire was reviewed by second language educators for omissions and revisions and another draft was field-tested with a large jurisdiction. Copies of the questionnaire were sent to the twenty-three school jurisdictions offering second language programs in 1978 under Section 150(1)(a) and (b) of the School Act.

Five school jurisdictions were selected for intensive study. They were chosen on the basis of the diversity of programs offered, and the varying stages of adoption and school setting which they represented. These five boards were provided with assistance as necessary in the compilation of data according to the research questions, i.e., program type, stage of adoption, instructional level, and school size. Once the data

9

had been compiled, the information was reviewed for completeness and possible areas of misinterpretation. Interviews with selected personnel from each of the five boards were arranged to provide clarification of the questionnaire items and on specific details concerning the second language programs offered.

FINDINGS

• Instructional Costs - All CORE FRENCH programs at the elementary level had negative additional teacher costs, i.e., cost savings, indicating that the cost of the teachers was less than the potential cost of replacing them with regular teachers. This finding held for all elementary French programs in an implementation stage. However, all other elementary programs, (EXTENDED, BILINGUAL and IMMERSION) in a maintenance stage incurred additional costs for teacher salaries and benefits. At the junior high level, two of the five CORE FRENCH programs had megative costs as did one of the three IMMERSION FRENCH programs; all other French programs had additional costs for teachers.

When additional teacher costs and other instructional costs were combined, only three programs with negative additional teacher costs had overall additional costs: a rural junior high CORE FRENCH program, the urban elementary EXTENDED FRENCH program, and a rural elementary IMMER-SION FRENCH program.

Examination of the instructional costs incurred for equipment, materials, transportation and other related expenditures revealed some consistencies across programs, stages and instructional levels. In general, progressively less was spent by all boards on these items advancing from the elementary to the secondary levels, as the result of a decreasing pattern in the FTE pupils. Expenditures by the largest board for junior high (implementation) and senior high (maintenance) CORE FRENCH programs reflected increasing costs. All programs in an implementation stage incurred considerable additional expenditures. The urban board providing an articulated IMMERSION FRENCH program (mainten-

ance) across all instructional levels expended substantial additional funds for instructional purposes; the single most costly item for this program at all instructional levels was transportation. While the other two urban boards also provided transportation for the IMMERSION FRENCH program, the total amount spent was considerably less due to the fewer number of pupils involved. While the rural boards also provided transportation, this was not an additional cost to the French program as pupils required this service regardless of language of instruction.

• System Costs - While instructional costs (representing the cost of providing pupils with basic classroom instruction which requires a teacher and may include instructional materials and transportation) are incurred in individual schools, some costs are incurred for programs on a system—wide basis and depend on board policy and perceived program needs. If these additional services are provided, additional funds are allocated to specific programs. Both ancillary and developmental costs are system costs which can be attributed to a particular instructional level but not to a specific school. Ancillary costs are incurred for special activities, professional development, support staff, resource personnel and supervision; developmental costs are incurred for curriculum, assessment and other related expenditures.

Analysis of ancillary costs revealed a general trend across programs to spend more at the elementary than at either secondary level. Furthermore, substantially more financial support was provided to the IMMERSION FRENCH and BILINGUAL (FRENCH and UKRAINIAN) programs than to other programs; this was due largely to the support staff provided for these programs at the elementary level. All boards provided some consultative staff for the second language program. For CORE programs (maintenance) this was often the only ancillary service provided. Programs in an implementation stage tended to incur more ancillary costs; in addition to support staff and supervision, boards provided professional development activities for teachers and special activities for pupils. The fully articulated IMMERSION FRENCH program (maintenance) also received considerable financial support across all instructional levels.

Four boards reported developmental costs; for most programs these costs were incurred for the acquisition of curricular materials. Staff from three boards also developed materials, primarily for programs in an implementation stage. Generally, more expenditures were incurred for programs in the implementation than the maintenance stage; this was anticipated as programs are often developed and implemented concurrently.

The summary table presents the total additional cost for all programs offered by the five boards in the sample in 1978. When all program variations were added together the collective additional cost for the five boards was \$1,412,718.

Summary Table

Total Additional Cost for Second Language Programs
Offered by Intensive-Study Boards in 1978

and the state of t			
Program Type	Elem e ntary	Junior High	Senior High
CORE			
French Ukrainian German	\$ <78,997> - -	\$ 98,851 4,062 6,042	\$ 134,618 7,374 38,206

TOTAL	\$ 766,502	\$ 363,021	f \$ 283,195

RECOMMENDATIONS

The following recommendations are addressed to Alberta Education.

- Investigate the effects on teacher costs of varying pupil enrolment, teacher deployment and average teacher salaries.
- Investigate the impact of second language programs on the organization of schools in terms of the use of physical and human resources expended and opportunity cost.
- · Replicate the study in future years.
- Establish a mechanism to examine the requirements for providing a sound education in a second language.
- Investigate the costs of providing hypothetical "model" second language program alternatives.
- Encourage school jurisdictions to maintain accounting records to the <u>element</u> level so that expenditures are attributed to specific programs.
- Investigate the comprehensive additional cost of second language programs over a three or five year period.

CHAPTER 1

INTRODUCTION

This introductory chapter is divided into five sections. It provides background to the study, describes the purposes and defines the terms employed, and provides a general outline of the methodology and scope of the study.

BACKGROUND

The study responds to a need to investigate the additional costs incurred by Alberta school jurisdictions providing instruction in a second language. While second language core programs have traditionally been offered, a recent trend across Canada has been to introduce alternative programs - extended, bilingual and immersion - each of which provides increasing instructional time in second languages. A concomitant of this development has been an increased financial commitment on the part of the school boards which offer these types of second language programs. This study identifies the costs associated with the different program types.

In Alberta, the School Act was amended in 1968 to permit instruction in French from grades 1 through 12; in 1971, it was extended to include the use of languages other than English or French for purposes of instruction. Section 150 of the School Act, which deals with the matter of language of instruction, reads in part as follows:

150 (1) A board may authorize:

(a) that French be used as a language of instruction, or (b) that any other language be used as a language of instruction in addition to the English language, in all or any of its schools (1971:4).

Federally, the Language Programmes Branch of the Department of the Secretary of State was established to promote, facilitate and encourage the acquisition and use of the two official languages of Canada. Among the programs administered by this branch is the program of Bilingualism in

Education which was designed to provide increased opportunity for members of the majority official language group in each province or territory to acquire a knowledge of their second official language and for the minority official language group in each province or territory to be educated in their first official language. The Federal-Provincial Program of Cooperation for Bilingualism in Education was initially implemented in 1970. Those aspects of the program which apply especially to school systems include the formula payments and the special projects. According to the former, the Federal Government pays a percentage to each provincial government for education in the minority official language, for the teaching of the second official language and for administration costs. According to the latter, which are intended to assist provincial governments in developing innovative or experimental projects in both minority and second language instruction, the projects are financed on a cost-sharing basis between the federal and provincial governments.

Recently, the Ontario Ministry of Education sponsored a number of studies into the costs of French programs; three studies examined the costs of second language programs (Halpern et al, 1976; Partlow, 1977; MacNab and Unitt, 1978) while two compared English-language and French-language program costs (Desjarlais, 1977; Churchill et al, 1978). The present investigation represents a similar endeavor designed to identify dollar costs associated with instruction in a second language in the province of Alberta.

PURPOSES

The primary purpose of the study is to provide Alberta Education with the identification and explanation of additional costs incurred by school jurisdictions providing instruction in a second language in 1978. The

specific questions addressed are as follows:

- e What are the costs associated with different second languages?
 - French
 - Ukrainian
 - German
- · How do costs differ as a function of program type?
 - core
 - extended
 - bilingual
 - immersion
- What are the differential costs associated with the stages of program adoption?
 - development
 - implementation
 - maintenance
- How do costs vary as a result of instructional level?
 - elementary
 - junior high
 - senior nigh
- Now do costs vary as a result of school size?
 - small
 - medium
 - large
- How do costa vary as a result of school setting?
 - urban
 - rural

A secondary purpose of the study is to identify areas where the program accounting procedures maintained by school jurisdictions were inadequate in providing the cost data required in this investigation and to recommend corrective action.

¢:

DEFINITION OF TERMS

PROGRAM TYPES

CORE - a program in which the second language is taught as a subject for a period of time comparable to other school subjects.

EXTENDED - a program in which the second language is taught as a subject and in addition one other subject (art, music, social studies, etc.) is taught in the second language.

BILINGUAL - a program in which the second language is taught as a subject and two or more other subjects are taught in the second language so that pupils are instructed in the second language up to a maximum of 50% of the time.

IMMERSION - a program in which the pupils are instructed in the second language in excess of 50% of the time.

PROGRAM STAGES

DEVELOPMENT - the earliest stage in which a program is developed, curricular and assessment materials are acquired, and additional materials are developed and/or revised to meet the needs of the program.

IMPLEMENTATION - the second stage, in which the program materials which have been developed are field-tested on a system-wide basis by the teachers in the schools.

MAINTENANCE - the final stage in which the program is operating in the schools and requires only minimal assistance to enable it to continue operation.

INSTRUCTIONAL LEVEL

ELEMENTARY - grades 1 through 6.

JUNIOR HIGH SCHOOL - grades 7 through 9.

SENIOR HIGH SCHOOL - grades 10 through 12.

SCHOOL SIZE

SMALL - a school which has fewer than 200 pupils.

MEDIUM - a school which has 200 to 600 pupils.

LARGE - a school which has more than 600 pupils.

SCHOOL SETTING

URBAN - schools located in an urban setting.

MURAL - schools located in a rural setting.

COST TYPES

INSTRUCTIONAL - costs associated with providing classroom instruction to pupils.

- Teacher Salaries salaries and fringe benefits.
- Equipment equipment purchased.
- Materials supplies, textbooks and media materials purchased.
- Transportation transportation of pupils to school.

ANCILLARY - costs associated with providing supplementary services which benefit the pupils.

- · Special Activities trips, camps, cultural events, etc.
- Professional Development activities designed to enhance a teacher's effectiveness.
- Support Staff resource teachers, teacher aides, testing assistants, language laboratory assistants, secretaries.
- Resource Personnel research assistants, counsellors, external consultants.
- Supervision supervisors, consultants, department heads, curricular associates.

DEVELOPMENTAL - costs associated with developing a new program.

Curriculum - acquisition and/or development of curricular materials.

 Assessment - development of assessment materials and/or external evaluations.

ADDITIONAL COSTS

Costs which would not have been incurred had the second language program not been in existence.

- Instructional Salaries the difference between the cost of (a) second language teachers, and (b) additional teachers at average salaries of other programs required to maintain pupil/teacher ratios, were all second language full-time equivalent pupils to transfer into regular programs.
- Other Instructional those incurred specifically for the second language program.
- Ancillary ali incurred specifically for the benefit of pupils in the second language program.
- Developmental all incurred for the development of a second language program.

METHODOLOGY

It was decided to conduct the study in two stages. The first was associated with the identification of cost types described below and the development of methodological procedures. The primary sources of information were literature on the topic and the perceptions of second language educators. The second stage consisted of collecting and analyzing the data and determining the additional costs associated with each second language program.

TYPES OF COSTS

Additional costs have been defined as those which would not have been incurred had the second language program not been in existence. Three types of costs were identified: instructional costs incurred in providing

classroom instruction to pupils, <u>ancillary costs</u> incurred in providing supplementary services to program pupils and <u>developmental costs</u> incurred in developing new programs. Table 1 presents the elements which comprise each cost type.

• Instructional costs are basic to all programs as they represent the cost of the teacher, the instructional materials necessary to present the curriculum and the cost of transporting, where necessary, the pupils to the teacher. These costs are incurred every year.

As a teacher is required to instruct pupils regardless of the program in which they are enrolled, all teacher costs cannot be considered additional. Rather, the additional teacher costs are determined by calculating what it would cost to instruct all second language pupils in English, and subtracting this amount from the actual costs to instruct them in the second language. For these calculations, it has been assumed that additional English-speaking teachers would be employed at the average salary of present teachers, and that it would be necessary to maintain existing pupil/teacher ratios for English-language instruction in all school jurisdictions.

Table 1
Classification of Additional Costs

Special Activities	Curriculum
Professional Development Support Staff Resource Personnel	Assessment Other
	Support Staff

The other elements included under instructional costs are considered additional if they are provided specifically for a second language program without benefit to non-program pupils.

- Ancillary costs are all additional as they would not be incurred without the existence of the program. The supplementary services they represent are provided specifically for a particular program. These costs are discretionary in that the related services are not essential in offering a program; whether or not they are provided depends on their need as perceived by the school board. These costs may be incurred every year.
- Developmental costs are all additional as they are incurred for the development of a particular program. Their magnitude is dependent on the variety and extent of the developmental effort expended in initiating a program. These costs are not normally incurred once the program has reached the maintenance stage.

DATA COLLECTION

Once the cost types were identified, a questionnaire was designed to elicit information about the costs incurred by school jurisdictions operating second language programs. A draft questionnaire was reviewed by second language educators for omissions and revisions and another draft was field-tested with a large jurisdiction. Copies of the questionnaire were sent to the twenty-three school jurisdictions offering second language programs in 1978 under Section 150(1)(a) and (o) of the Alberta School Act.

Five school jurisdictions were selected for intensive study. They were chosen on the basis of the diversity of programs offered, and the varying stages of adoption and school setting which they represented. The five boards were provided with assistance as necessary in the compilation of data according to the research questions, i.e., program type, stage of adoption, instructional level, and school size. Once the data had been compiled, the information was reviewed for completeness and possible areas of misinterpretation. Interviews with selected personnel from each of the five boards were arranged to provide clarification of the questionnair items and on specific details concerning the second language programs offered.

4.00

Six of the remaining eighteen boards offering second language programs under Section 150(1)(a) and (b) returned their completed questionnaires. Due to the significant effort required by the study team to assist in the compilation of data and to ensure the accuracy and comparability of the information provided by the five sample boards, and the extensive revisions to financial and other data required, it was decided not to analyze or report the information from the six boards. Assuring parallel findings would have required the same detailed analysis as for the five sample boards.

ANALYSES.

As the calendar year 1978 encompassed portions of two school years, 1977-1978 and 1978-1979, the number of pupils and teachers reported for June, 1978 and December, 1978 were prorated to arrive at a calendar year equivalent. The pro rata numbers for 1978 were derived by assigning a weight of .67 to June and .33 to December so that full-time equivalent calculations would correspond to the financial data requested for the calendar year 1978.

In order to calculate the additional teacher salaries and benefits for second language instruction, it was necessary to convert all second language pupils and teachers to full-time equivalents (FTE) based on the number of minutes per week of second language instruction involved, thereby ascribing to them the same full-time status as pupils and teachers in the rest of the school system. The teachers' instructional minutes included both instruction and preparation time utilized in a second language program. The second language program FTE pupils, teachers and their earnings were subtracted from the total system figures to arrive at regular non-second language FTEs and earnings. Pupil/teacher ratios and average teacher salaries and benefits were calculated for each of the second language programs and for regular school programs. Hypothetical marginal regular program teacher costs were then determined by assuming a transfer of all second language FTE pupils to regular programs and calculating the extra regular program teacher costs which would be required to maintain existing pupil/teacher ratios at average salaries and benefits. These

29

marginal regular teacher costs were deducted from <u>actual</u> second language teacher costs to arrive at <u>additional</u> second language teacher costs. In certain cases, this calculation resulted in negative additional second language costs, due in part to lower average teacher salaries and/or higher pupil/teacher ratios for second language programs.

As ancillary and developmental costs are incurred on a system-wide basis rather than at the school level, analysis by school size did not apply. Ancillary costs associated with staff providing services to more than one program were allocated to a specific program on the basis of time estimates.

SCOPE

The study was delimited as follows:

- e Information was requested from all school jurisdictions offering second language programs pursuant to Section 150(1)(a) and (b) of the Alberta School Act.
- Detailed analysis of additional costs was undertaken for five of the above twenty-three school jurisdictions.
- Cost data were collected for the calendar year 1978.

The study objectives, research design and methodology established a number of limitations for the study:

- The restriction in scope related to the time at which information was collected indicate that conclusions can be drawn only about the 1978 calendar year.
- It was outside the scope of the present study to examine or discuss the quality of instruction offered to students.

Estimation of the comprehensive additional costs (all costs incurred over the life span of any program) of any cost type was beyond the purview of the present investigation.

CHAPTER I

RELATED LITERATURE

The purpose of this chapter is to examine the different approaches taken by others to investigate the costs of second language instruction. While extensive literature is available on the different types of second language programs, relatively little has been written on the costs of offering such programs. In the Canadian context, however, the Ontario Ministry of Education has sponsored a number of studies into the costs of Trench programs. The types of costs identified and the methodological approaches used to examine them are reported hereunder. A description of the PAB Classification System used by Alberta school jurisdictions concludes this chapter.

TYPES OF COSTS IDENTIFIED IN RELATED STUDIES

Three studies in Ontario examined the costs of second language programs (Halpern et al, 1976; Partlow, 1977; MacNab and Unitt, 1978) while two compared French-language and English-language program costs (Desjarlais, 1977; Churchill et al, 1978). Investigation of the dollar costs of alternative second language programs was one of the purposes of the research conducted by Halpern; the other two second language studies were designed specifically to examine the costs of alternative French programs.

Each of the three second language studies divided costs into three dimensions:

• program

- delivery
- environment.

In general terms, program costs are those associated with the curricular content, delivery costs with the presentation of the program to the pupils and environmental costs with the facilities necessary to provide

the program to the pupils. Table 2 presents the classification of costs according to the three dimensions. While there is some consensus with respect to the broad classifications, differences in individual types of cost are evident. For example, Halpern classified the costs of consultants and coordinators under program development while Partlow subsumed this expenditure under delivery. Furthermore, Halpern viewed pupil transportation as a delivery cost while Partlow and MacNab and Unitt considered it environmental. All agreed, however, that the cost of teacher salaries and instructional materials are delivery costs — those associated directly with the instruction of pupils.

The two studies concerned with comparing French-language and English - language program costs classified them in a similar albeit less-detailed fashion than did the second language program studies. Table 3 presents their classification of costs.

METRODOLOGY OF RELATED STUDIES

Table 4 presents a summary of the samples, programs and analytic procedures undertaken in all five Ontario studies. Inspection of the table reveals differences with respect to sampling, programs studied and analytic procedures. While the reports were all useful in defining the cost areas to be examined, their analyses included a more comprehensive review of program costs than the present investigation which attempts to identify and explain additional costs only. The concepts of instructional time and level of service, addressed in the Ontario studies, were of importance to the major purpose of this study. Each is examined in turn.

INSTRUCTIONAL TIME

An important concept in the second language program studies was the analysis of instructional time (the cost of the teacher), the most significant cost of offering a program to pupils. Determining the additional cost of second language programs requires a method of comparing instructional time across programs. Exploration of the methods employed in the Ontario Studies provided a basis for developing a similar analytic

technique in the present investigation.

Central to the Halpern costing model is the allocation to various programs of instructional time, i.e., the minutes per day or per cycle when a pupil is in school. The cost of delivering a program to pupils depends on the deployment of teachers and purils in relation to one another. any given school, despite organizational variations, the number of pupils assigned to a teacher averages out to a "traditional classroom" in which each teacher is responsible for delivering subject matter to a group of pupils for a certain period of time. For a pupil body of any size, the average class size (pupils per teacher) determines the number of classes and thereby the number of teachers. Therefore, class size is an important determinant of cost as decisions about it determine the minimum number of teachers needed for a particular school. The number of additional teachers required is determined by the amount of preparation time allocated to This additional teacher time adds to school costs and is assigned to the program for which it is provided.

Partlow extended the cost data provided by Halpern to include system-wide costs as well as in-school costs. For both cost types, the allocation to a particular school or program within it depended on minutes per week of instruction and number of pupils. For example, if French instruction required 150 minutes out of a total of 1500 minutes per week and 200 of the 600 students in the school took French, the portion of the principal's salary allocated to the cost of French instruction would be (1977:5):

$$\frac{150}{1500}$$
 x $\frac{200}{600}$ x principal's salary

A similar procedure was used in the calculation and apportionment of all costs to a program. The major variables depended on the <u>number of pupils</u> and the <u>time</u> assigned to a program. Costs were compiled into specific categories of expenditures within the school: direct costs of the French program only; shared costs within the school - salaries, services and materials; system-wide costs shared within the school - administration, instructional services and supervision; capital costs; and transportation of

pupils (1977:4). Partlow attempted to calculate the <u>actual</u> costs of elementary French for any Ontario school system in 1975-1976.

MacNab and Unitt further refined cost analysis techniques. They developed a cost analysis model which could be applied to any program and which defined the cost of a program as follows:

$$C_e [M_e (I_e + P_e)]$$

where e = a subject or program element

 C_a = proportion of time allocated to a program element

 $I_{\rho} = instruction time$

Pe = planning and preparation time

M_e = salary (or average salary) of teachers of a program element

The per pupil cost ratio can be obtained by dividing this cost weight factor by class size Z. The model can be useful to planners because the five parameters C_e , I_e , P_e , M_e and Z determine most of the cost of delivering programs (1978:77).

LEVEL OF SERVICE

Whereas the second language program cost studies were concerned primarily with analyzing the annual cost of classroom instruction, the language of instruction studies were concerned with comparing the cost of services provided to pupils in English and French school settings.

The Desjarlais study was designed to determine the costs of providing instruction in French to pupils enrolled in French-language instructional units in areas of high concentration of Francophones. Two types of differential costs of French-language instruction were postulated: the actual differential cost (expenditures) incurred by a school board during the year, the actual differential cost being brought about by the presence of two language groups within a board's organization, and the estimated differential cost for additional services and materials needed by a board to promote a level of service which would provide a quality, i.e., "model" education program for Francophones (1977:3). The summaries of the actual differential costs reported conformed to the Uniform Code of Accounts used

by the Ontario Ministry of Education.

The Churchill study extended the work of Desjarlais by defining a general theoretical framework for costing educational services for a linguistic minority. The study, employing a more intensive methodology than usually adopted in studies of school board costs, analyzed the differential costs of instruction for different types of schools both within and between school boards at the elementary and secondary levels. The study concluded that Francophones in Ontario had unmet educational needs and that they potentially suffer from a position of inequality compared with anglophones, due in part to the differential services offered to pupils and teachers (1978:iii-iv).

PAB CLASSIFICATION SYSTEM

In 1972, Alberta Education published an interim edition of a <u>Program Accounting and Budgeting</u> (PAB) manual to provide provincial school jurisdictions with a standardized system for classifying financial transactions and balances. This PAB system emphasizes the purposes of a school organization by identifying the distribution of resources to the programs or activities which form the basis for a school system's existence. Program accounting forms the essential information base for the development of the processes of a Planning, Programming, Budgeting, Evaluation System (PPBES).

Traditional accounting and budgeting practices emphasize the physical and human resources purchased for use in the operation of a school system; program accounting and budgeting add additional levels of information about the programs and activities designed to provide instruction to the pupils. In this PAB system, the traditional type of information is retained to assist in the control of expenditures, while the new emphasis on the goals of the organization permits decision-makers to assess the purposes of the system in terms of the resources which are being used.

In 1975, a supplement to the interim document was published which contained changes to the original responding to the needs of the provincial and local

100

governments. Subsequent amendments to the codes and classifications are being developed continuously as additional needs are identified.

The following types of information contained in the PAB Manual are relevant to the present study:

OBJECTS - the commodity, article or service obtained as a result of a specific expenditure. The code numbers and classification of the seven major categories or first-level objects are outlined below:

Code	Classification
200	Salaries
300 400-500	Employee Benefits and Allowances Services Purchased or Contracted
600	Supplies and Materials
700	Capital Outlay
800	Debt Services
900	Transfers

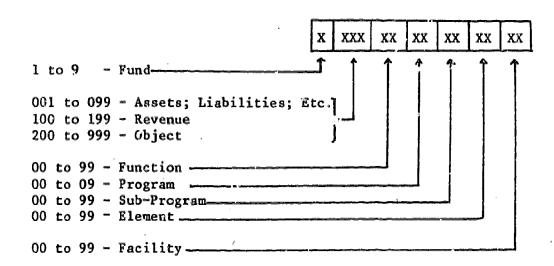

FUNCTIONS - the broadest category of expenditure that is desirable or practical to identify for educational purposes. The twelve functions are:

Code ,	Classification
02	Elementary School Instruction
03	Junior High School Instruction
04	Sensor High School Instruction
05	Special Education
06	Community Services
07	Pupil Personnel Services
08	Administration
09	Operation and Maintenance
10	Transportation of Pupils
11	Debt Services
12	Capital out of Current Revenue
13	Early Childhood Services

Each of the above functions is further defined by the <u>programs</u> which comprise it. Program costs are allocated to the appropriate functional area that receives the goods or services. <u>Sub-programs</u> provide a further sub-division of a program, i.e., second languages is program 02, French is sub-program 01. An <u>element</u> is a further subdivision possible under the PAB system, e.g. Core, Extended, Bilingual, Immersion.

The coding system describes the manner in which the various accounts are coded to facilitate identification, posting, storage, and retrieval of information. The coding structure consists of a total of fourteen digits, separated into seven distinct blocks of information as illustrated.*

SYNOPSIS

The Ontario studies served to define the board areas of second language program costs. The general consensus among investigators with respect to the broad classifications did not apply to specific types of expenditures subsumed under each. Examination of the <u>PAB Classification System</u> employed in Alberta defined the types of costs which could be retrieved and assigned to a specific program.

The Ontario studies were concerned with a more comprehensive review of program costs than the present investigation, the primary purpose of which

^{*}Alberta Education. PAB Manual. (1975:6).

is to identify additional costs incurred by school jurisdictions operating second language programs. Furthermore, organizational differences between the Ontario and Alberta school systems precluded replication of the former studies. Differences in the studies reviewed with respect to sampling, programs studied and analytic procedures provided the investigators of the present study with considerable choice of approach, however; of particular relevance were the concepts of instructional time and level of service.

The Alberta study, then, is concerned only with the identification and explanation of additional costs of second language instruction. This meant omitting any analysis of costs which can be attributed to any program on the basis of assigning to each a portion of the costs based on the number of pupils. Included among these costs are environmental costs and those associated with providing services of potential benefit to all pupils in a school system; according to the PAB System, the related functions include 05 to 13 identified in an earlier section of this chapter. Only costs incurred specifically and exclusively for second language programs, without benefit to other non-program pupils were collected and analyzed. Three types were identified: instructional, ancillary and developmental. The determination of the additional portion of each is reported in the following chapter.

CHAPTER III

METHODOLOGY

This chapter presents the methodology of the study. It briefly describes the instruments used and the method of collecting the data. Reported in detail are the analytic procedures and the method of calculating additional second language program costs.

INSTRUMENTATION

QUESTIONNAIRE

While the review of the literature served as a basis for the initial development of the questionnaire, discussions with members of the Steering Committee served to delimit the scope of the study. Once a tentative list of questions related to the cost areas under study was developed, it was submitted to the Supervisor of Second Language Instruction for a large jurisdiction who examined its comprehensiveness and determined the feasibility of collecting the data. A preliminary version of the questionnaire was drafted and reviewed for omissions and revisions. A second draft was devised and submitted to members of the Steering Committee for their reaction. The final draft was field-tested with a large jurisdiction. Copies of the final questionnaire were sent to school jurisdictions operating second language programs. An abridged version is presented in Appendix A.

The questionnaire was designed to elicit information about the costs Alberta school jurisdictions incur when implementing instruction in a second language. It consisted of 27 items, seven of which required information necessary to classify the cost data required in the remaining twenty questions. The items in the questionnaire corresponded to the research questions and were arranged to facilitate the completion of the questionnaire by personnel from a school jurisdiction. It was divided into four major sections:

- total school jurisdiction information
- second language instruction
- · second language support staff
- · second language program development

Information about the total school jurisdiction was requested to serve as a basis for comparing <u>instructional costs</u> between regular instruction and second language instruction. Consequently, questions related to teacher salaries, materials, equipment and transportation were parallel. Cost data specific to second language programs were requested for two types of costs - <u>ancillary</u> and <u>developmental</u> - both of which were defined as additional as they are incurred in providing services and materials of benefit exclusively for the second language programs.

INTERVIEW SCHEDULE

An interview schedule was designed to elicit information from school jurisdictions which would assist the investigators in interpreting the data provided in the questionnaire. The serview schedule is presented in Appendix B.

DATA COLLECTION

Five Alberta school jurisdictions, operating second language programs pursuant to Section 150(1)(a) and (b) of the School Act, were selected for intensive study. They were chosen on the basis of the diversity of programs which they offered and the programs of adoption represented. The five boards were provided with assistance as necessary in the compilation of data according to the research questions, i.e., program type, instructional level, school size. Once the data had been compiled, the information was reviewed for completeness and possible areas of misinterpretation. Interviews with selected personnel from each of the five boards were arranged during September to provide clarification as necessary of the questionnaire items and specific details concerning the

and the results tabulated.

ANALYTIC PROCEDURES

As the cost data for the calendar year 1978 encompassed portions of two school years, 1977-19/8 and 1978-1979, the number of pupils and teachers reported for June 1978 and December 1978 were prorated to arrive at a calendar year equivalent. The pro rata number of pupils and teachers for 1978 was derived by assigning a weight of .67 to June figures and .33 to December figures so that full-time equivalent calculations would correspond to the financial data requested for the calendar year 1978. For example, if there were 200 pupils in June and 250 in December, the calendar year equivalent would be 216.5 pupils $(200 \times .67 = 134.0 \text{ plus } 250 \times .33 = 82.5)$.

In order to calculate the cost of second language instruction, it was necessary to convert all second language pupils and teachers to <u>full-time</u> equivalents (FTE), thus ascribing to them the same full-time status as pupils and teachers in the system.

All pupils enrolled in the system were considered to be full-time equivalents. By converting second language pupils into FTEs, based on minutes per week of second language instruction, fewer are assumed to receive all their instruction in the second language. This permits the calculation of pupil/teacher ratios for second language programs which are comparable to system calculations. For example, if 400 pupils were enrolled in a senior high CORE FRENCH program and received 200 minutes of such instruction each week, they would be considered to be 400 $\times \frac{200}{1600} = 50.0$ full-time equivalent pupils. If the 400 pupils were enrolled in an IMMERSION FRENCH program in which they received 960 minutes per week of instruction in French, they would be equal to $400 \times \frac{960}{1600} = 240.0$ full-time equivalent pupils.

^{*}Total minutes per week of instruction.

FTE teachers were derived in the same manner, based on the amount of time they spent instructing a given subject. Their instructional load (teaching and preparation time assigned to a given discipline) was taken from the teacher workload survey which all teachers complete each year. This was undertaken for both June and December and subsequently prorated to arrive at a calendar year equivalent.

Once all second language program FTE pupils and teachers were calculated they were pooled to arrive at the total number of pupils and teachers receiving/giving instruction in the second language. These FTE pupils, teachers and their salaries were subsequently subtracted from the total system to arrive at regular non-French FTEs and salaries.

For example, if Board X contained 1,000 elementary pupils of which 25 were FTE CORE FRENCH and 50 were FTE IMMERSION FRENCH, the regular system must have contained 925 regular pupils:

FRENCH PROGRAM

•	TOTAL SYSTEM	<u>Core</u>	Immersion	Total	REGULAR SYSTEM*
Pupils	1,000	25	50	75	925
Teachers	40	1	2.5	3.5	36.5
PTR	25.00	25.00	20.00	21.43	25.34
Teacher Salaries	\$800,000	\$22,000	\$45,000	\$67,000	\$733,000

The regular system figures which are deduced assume that the staffing pattern (pupils/teacher) of the regular system is the one which would exist if no French were offered, and that pupils would attend the community school rather than a special school. These regular system figures are used to determine the additional costs as outlined below.

CALCULATION OF ADDITIONAL COSTS

Three types of additional costs were identified: instructional costs incurred in providing classroom instruction to pupils, ancillary costs

^{*}The total system minus the total French program.

incurred in providing supplementary services to program pupils and developmental costs incurred in developing a new program. Instructional costs are incurred in schools as they represent the most essential elements necessary to provide instruction - a teacher, instructional materials and transportation if necessary. Classification of these costs was requested by instructional level and school size to assess the effects, if any, that these have on the cost. Ancillary and developmental costs are discretionary as they are not essential in providing instruction to pupils. If they are incurred, they are provided to benefit the program on a systemwide basis. Their classification, therefore, was requested by instructional level only.

The procedures used to calculate the different types of costs are reported below.

INSTRUCTIONAL

Teacher Salaries - All teacher salaries for second language programs are not "additional" as the absorption of the second language pupils by the regular system would require the employment of additional teachers if the pupil/teacher ratio (PTR) were to remain the same. As a teacher is required to instruct pupils regardless of the program in which they are enrolled, the additional teacher costs are determined by calculating what it would cost to instruct all second language pupils in English, and subtracting that amount from the actual costs to instruct them in a particular second language. For these calculations it has been assumed that additional English-speaking teachers would be employed at the average salary of present teachers, and that it would be necessary to maintain existing pupil/teacher ratios for English-language instruction in all school jurisdictions.

The following illustrates the calculation of the additional portion of the second language teachers' salaries:

	REGULAR SYSTEM	CORE FRENCH	TRANSFER OF PUPILS
Pupils	10,000	200	10,200
Teachers	450	. 10	450
PTR	22.22	20.00	22.67
Teacher Salaries	\$9,675,000	\$220,000	

If the CORE FRENCH pupils were added into regular programs, the PTR would increase from 22.22 to 22.67 thereby decreasing the attention each child receives by .0009 (1/22.22 = .0450, 1/22.67 = .0441) assuming that each child receives equal attention. Restoring the PTR to 22.22 would require an increase in staff of 9.05 teachers (10,200/22.22 = 459.05 - 450.0) which would cost \$194,575 (\$9,675,000/450 = \$21,500 x 9.05 = \$194,575). Therefore, the additional cost of teacher earnings for the CORE FRENCH program is \$25,425 (\$220,000 - \$194,575). If the CORE FRENCH teachers' average salary were the same as that for the regular system the additional cost would be \$20,425 (\$21,500 x 10 - \$194,575) because of the lower PTR for the CORE FRENCH program. The additional earnings part of instructional costs varies as a result of the average teacher salary and the number of pupils per teacher.

 Other Instructional - Included are: equipment, materials, transportation, other.

These are all "additional" if they are incurred specifically for the program. It is assumed that if the program did not exist, the pupils could be absorbed into regular programs without requiring the purchase of extra equipment or materials, and that the pupils would not incur additional transportation costs. This assumption would not be valid if there were a significantly greater amount of instructional time devoted to second languages in Alberta.

SYSTEM COSTS

Ancillary and developmental costs are incurred on a system-wide basis rather than at the school level. Analysis by school size did not apply.

- Ancillary All ancillary costs are treated as additional as the related services are provided exclusively for the benefit of the second language program. Included are:
 - · special activities
 - professional development
 - support staff
 - resource personnel
 - supervision

Ancillary costs associated with staff providing services to more than one program were allocated to a specific program on the basis of time estimates provided by supervisors and/or superintendents in each board.

- Developmental All developmental costs are treated as addit anal they are incurred directly in the development of second language programs. Included are:
 - curriculum
 - assessment
 - other.

SYMOPSIS

This chapter has described the instruments used to collect the data from the five school jurisdictions. The boards were offered assistance as necessary to compile the data, subsequent to which selected personnel from each board were interviewed to provide clarification about the questionnaire items and further detail concerning the second language programs.

Pro rata numbers of teachers and pupils were derived from two school years so that these data would correspond to the financial data requested for the calendar year 1978. Calculation of the additional teacher salaries required for second language instruction entailed the conversion of second language teachers and pupils into full-time equivalents (FTE) based on the

number of minutes per week of instruction involved, thereby ascribing to them the same full-time status as teachers and pupils in the rest of the school system. By subtracting second language program FTE pupils, teachers and their salaries, it was possible to arrive at the cost of regular non-second language instruction. Hypothetical marginal costs of regular teachers were then determined assuming that the second language program pupils transferred into regular programs by calculating the extra regular teacher costs required to maintain the existing pupil/teacher ratios. By subtracting these costs from the actual cost of a particular second language program it was possible to arrive at the additional teacher cost.

Ancillary and developmental costs were incurred on a system-wide basis only. All attributed specifically to a second language program were additional.

CHAPTER IV

FINDINGS

This chapter reports the financial and non-financial findings of the study. Results are organized by program dimensions according to the three types of costs: instructional, ancillary and developmental. A final section presents the total additional costs for each program.

PROGRAM DIMENSIONS

The sample consisted of five Alberta school jurisdictions. The three urban boards have been labelled A, B and C; the two rural boards have been labelled P and E. All five boards offer a full complement of instructional levels with the exception of Board E which offers no senior high school program.

The five boards were chosen because of the diversity of second language programs and varying stages of adoption which they represent. All five offer CORE FRENCH for all instructional levels and IMMERSION FRENCH at the elementary level. EXTENDED FRENCH is offered by Boards A and D only while BILINGUAL FRENCH is offered solely by Board D. Of the five boards, only Boards A and B offer Ukrainian and German programs.

Table 5 presents the programs and their stages of adoption which were offered by each board in 1978. Except for Board A's junior high CORE FRENCH program, all second language CORE programs were in a maintenance stage during 1978. Both BILINGUAL UKRAINIAN programs were in an implementation stage. All of Board D's programs were in a maintenance stage.

Table 6 presents the distribution of secon anguage programs according to school size. Most programs were offered in small or medium schools. No program at the elementary level was offered in a large school; the few at the secondary level were for Boards A and B only. These two boards were the

only two in the sample which had large secondary schools.

Table 7 presents the full-time equivalent (FTE) pupils in each second language program and the percentage this represents of all pupils in each system at each instructional level. For all boards, except A, more pupils were enrolled in the elementary French programs with a general decrease at each succeeding secondary level. In Board E, approximately a third of all FTE pupils took French at both the elementary and junior high levels (33.57 and 25.69 per cent, respectively). For the remaining boards, the total French pupils represented a much lower proportion of all pupils.

Table 8 presents the staffing patterns (pupils per teacher) for each second language program. While no consistency across all programs or boards appears evident, some uniformity existed across programs within boards. For both CORE and IMMERSION programs, there was a gradual decrease in the number of pupils per teacher from the elementary to the senior high instructional level for Boards B and E. While this pattern held for CORE FRENCH in Board D, it was reversed for the EXTENDED and BILINGUAL FRENCH programs in which teachers were responsible for increasingly more pupils from the elementary to the secondary levels; this was due largely to the very low enrolments* of the schools in which these elementary programs were located in this board.

Table 9 presents the staffing patterns (pupils per teacher) for the total system, the total French, total Ukrainian and total German programs and the total non-second language pupil/teacher ratios (PTR) for each board at all three instructional levels. This table provides some indication of the impact of the second language programs on the total system.

These tables describe the sample and indicate the dimensions of the study which apply. Due to the limited distribution of programs among the different school size classifications, information concerning this dimension is presented in Appendix C. Total costs only are reported in

^{*}Board D operated a few elementary schools whose enrolments were below 50 pupils.

this chapter to permit the presentation of data in a manner which makes possible comparisons among programs at the three instructional levels.

INSTRUCTIONAL COSTS

Two types of instructional costs have been identified in this study: teacher salaries and "other" costs associated with equipment, materials, transportation and related instructional expenditures. While the latter are all additional if they are incurred specifically and exclusively for the second language programs, the portion of teacher salaries which is additional is dependent on the cost of replacing the second language teachers (if the program did not exist) by regular teachers in order that the pupil/teacher ratio of the system without second language programs remains the same. All calculations were carried out within school size classifications, i.e., second language programs located in small schools were compared with regular programs in small schools. This assumes that pupils and teachers would remain in a school of comparable size (if not necessarily the same school) if the second language program did not exist. Totals were then determined by adding together individual school size calculations.

This section is divided into three parts: the first dealing with the additional teacher salaries, the second with "other" instructional costs and the third with the total additional instructional costs.

ADDITIONAL TEACHER SALARIES

Table 10 presents the additional teacher salaries for each second language program. The actual teacher salaries are reported in the cost schedules for each program presented in Appendix D. The most notable feature about the table is the fact that certain programs had negative additional costs (identified by bracketed figures). This indicates that if no second language program existed, the cost of maintaining the pupil/teacher ratios (PTR) of regular programs, after transferring second language program pupils, would in these cases, be higher than providing the individual

second language teachers. This applied to all elementary CORE FRENCH programs and all elementary programs in an implementation stage. However, all other elementary French programs (EXTENDED, BILINGUAL and IMMERSION) in a maintenance stage incurred additional costs for teacher salaries and benefits. At the junior high level, two of the five CORE FRENCH programs had negative costs as did one of the three IMMERSION FRENCH programs; all other French programs had additional costs for teachers. No consistencies were evident at the senior high level. While all CORE GERMAN programs incurred additional teacher costs, Ukrainian programs did not exhibit a similar pattern.

This negative cost balance is explained by two factors: the different staffing patterns (pupils/teacher) of the regular system (total system minus total French/Ukrainian/German), and the average earnings of the teachers. Generally, the second language teachers earned less than the regular teachers due to fewer years of teaching experience. As school boards increasingly hire inexperienced specialized staff for second language programs, the effect is that regular staff have proportionately more years of experience than second language teachers. The specialized program staff cost relatively less because they are more junior in relation to regular staff who are more experienced, therefore, more expensive. Furthermore, staffing patterns account for a difference in costs. If the PTRs are equivalent, the difference in cost will be reflected only in the difference in average salaries whereas if the PTRs are different, this will also affect the cost. The magnitude of the amount depends on the number of pupils involved.

"OTHER" INSTRUCTIONAL COSTS

Table 11 presents the additional instructional costs incurred for equipment, materials, transportation and other related expenditures for each program. In general, relatively little was spent specifically for the CORE programs which were all, with the exception of Board A's junior high CORE FRENCH program, in a maintenance stage. In most cases, expenditures were incurred for materials only. Programs in an implementation stage tended to incur more costs due to the acquisition of instructional

materials and the transportation of pupils to schools offering BILINGUAL and IMMFRSION programs.

Board B's IMMERSION FRENCH programs were particularly expensive. This Board is the only one of the five jurisdictions which offers an articulated immer ion program across all instructional levels. It provided transportation to all pupils who had to leave their community school in order to attend the immersion centres. This situation differs from the other boards which are implementing new programs where the number of pupils is smaller and therefore incur a lower transportation cost. Board D offers a BILINGUAL FRENCH program in a maintenance stage but it does so within an area where pupils are bussed regardless of program, and therefore transportation for the French program is not an additional cost.

TOTAL INSTRUCTIONAL COSTS

Table 12 presents the total instructional costs for each second language program. Adding the "other" instructional costs to that of the additional teacher salaries did not tend to eliminate negative cost balances. Since the CORE FRENCH programs did not incur many expenses, the balance for most of them tended to remain negative, i.e., costing less than replacing the second language teachers with regular teachers if the pupils were absorbed by the regular system. Only three programs with negative additional teacher costs had overall additional costs: Board E's junior high CORE FRENCH program, Board A's elementary EXTENDED FRENCH program, and Board E's elementary IMMERSION FRENCH program; the latter two were both in an incelementation stage.

Instructional costs depended principally on the cost of the teacher. If staffing patterns and average earnings were identical, there would be no additional cost in providing second language programs. However, as these two factors varied, so did costs. The other cost elements comprising instructional costs depended on the total number of pupils involved and the expenses incurred.

SYSTEM COSTS

Certain costs are incurred for programs on a system-wide basis and depend entirely on board policy and perceived need. If the services which incur the costs are provided, additional funds are allocated to a specific program. Both ancillary and developmental costs are system costs which can be attributed to a particular instructional level but not necessarily to a specific school. As a result, ancillary and developmental costs are reported by level only.

ANCILLARY COSTS

Ancillary costs are incurred for special activities, professional development, support staff, resource personnel and supervision. Financial allocations to each are reported in the cost schedules for every program presented in Appendix D.

Table 13 presents the total ancillary costs for each second language program. A general tendency across all program variations was to expend more at the elementary level than at either secondary level. This might be anticipated as the boards generally had the greatest number of French pupils at the elementary level with decreasing numbers at the junior and serior high levels. In most cases, substantially more financial support was provided to the IMMERSION programs than the other types. This was due largely to the support staff provided for the elementary programs for both BILINGUAL and IMMERSION programs.

All boards provided some consultative staff for the second language programs. For CORE programs, this was often the only ancillary service provided. Two CORE programs incurred no ancillary expenses at all, Board A's junious bigh UKRAINIAN program and Board B's senior high GERMAN program.

Programs in implementation stage tended to incur more expenditures accounted for by the number of services provided. In addition to support staff and supervision, boards tended to provide professional development activities for the teachers and special activities for the pupils. Considerable financial support was also provided to Board B's IMMERSION

FRENCH programs (maintenance stage); the reasons for this are the same as for programs in an implementation stage - more services provided to the programs.

DEVELOPMENTAL COSTS

Developmental costs are incurred for curriculum, assessment and other developmental expenditures. Financial allocations to each are reported in the cost schedules for every program presented in Appendix D.

Table 14 presents the total developmental costs for each second levelope program. While all boards except C reported some developmental costs, the amount in most cases was accounted for directly by the acquisition of curricular materials. Programs in an implementation stage tended to incur more expenditures in this type of cost; this would be anticipated as programs tend to be developed and implemented concurrently. Once a program reaches the maintenance stage, the majority of the developmental effort has been completed although new materials are purchased and/or developed on a smaller scale than during the implementation stage.

TOTAL ADDITIONAL COSTS

Table 15 presents the total instructional, ancillary, and developmental costs for each second language program at the elementary level. Of the CORE FRENCH programs, only Board E's program incurred sufficient ancillary and developmental costs to result in a total additional cost; for the others, the ancillary and developmental costs served only to reduce the negative balance attributed to teacher salaries. The other program in which a negative balance remained was Board C's IMMERSION FRENCH program. In all other instances, the ancillary and developmental costs produced a net additional cost for the second language programs. Generally speaking, the greater the amount of French provided the greater the total additional cost.

Table 16 presents the instructional, ancillary and developmental costs for each second language program at the junior high level. Three programs retained a negative balance after all costs were considered: Board B's CORE FRENCH program, Board E's IMMERSION FRENCH program and Board A's CORE UKRAINIAN program. All others resulted in an additional cost.

Table 17 presents the instructional, ancillary, and developmental costs for each senior high second language program. Two retained a negative balance after all costs were considered: Board D's BILINGUAL FRENCH program and Board B's CORE UKRAINIAN program.

Table 18 summarizes the preceding tables, reporting the total additional cost for each program. CORE FRENCH programs did not incur the additional costs that the other programs did. Of the fourteen CORE FRENCH programs, nine incurred additional costs ranging from a low of \$1,458 to a high of \$116,010. For CORE UKRAINIAN programs, two incurred additional costs while two did not. All three CORE GERMAN programs incurred additional costs. Of the six EXTENDED and BILINGUAL FRENCH programs, all incurred additional costs except Board D's senior high BILINGUAL FRENCH program when all costs were included. Two of the nine IMMERSION FRENCH programs did not incur additional costs when all costs were considered, Board C's elementary program and Board E's junior high program.

SYNOPSIS

This chapter has presented a description of the sample and reported the findings. Instructional costs, representing the cost of providing basic instruction to pupils, depended primarily on teacher salaries. Whether or not second language teachers' salaries were additional depended on the staffing patterns and differing program average salaries of teachers in a particular school. Second language teachers tended to earn less than regular teachers which often resulted in a negative cost balance. The addition of other instructional expenditures to the negative teacher costs tended not to offset the negative balances resulting in an overall negative

^{*}Implementation Stage

cost balance.

Ancillary costs were incurred most extensively at the elementary level. Substantial financial support was provided to the IMMERSION FRENCH and BILINGUAL (FRENCH and UKRAINIAN) programs. This was due largely to the support staff provided for these programs at the elementary level. CORE programs tended to receive the services of consultative staff only. Programs in an in lementation stage tended to incur more ancillary costs; in addition to support staff and supervision, boards provided professional development activities for teachers and special activities for the pupils.

Developmental costs were incurred by all boards except one. In most cases, the entire amount was attributable to the acquisition of curricular materials. Few materials were developed for specific programs.

When all additional costs were combined, some programs retained a negative cost balance which resulted from the cost of the teacher. The total additional amount spent on any program depended largely on the extent of ancillary services provided.

CHAPTER V

SUMMARY, CONCLUSIONS AND RECOMMENDATIONS

This chapter is divided into two sections. The first provides a summary of the purposes, the methodology, and the findings of the study. The second section provides the conclusions and recommendations arising from the investigation.

SUMMARY

PURPOSES

The primary purpose of the study was to identify and explain the additional costs incurred by Alberta school jurisdictions providing instruction in a second language during the calendar year 1978. The specific questions addressed were as follows:

- What are the costs associated with instruction in each of French, Ukrainian and German?
- How do costs vary as a function of program type within each second language (CORE, EXTENDED, BILINGUAL, IMMERSION)?
- What are the costs associated with the stages of program adoption (development, implementation, maintenance)?
- How do costs vary as a result of instructional level (elementary, junior high, senior high)?
- How do costs vary as a result of school size (small, medium, large)?
- How do costs vary as a result of school setting (urban, rural)?

A secondary purpose of the study was to identify areas where the program accounting procedures maintained by school jurisdictions were inadequate in providing the cost data required in this investigation and to recommend corrective action.

76

METHODOLOGY

The study was conducted in two stages. The first stage identified cost types and developed methodological procedures. The primary sources of information were literature on other second language cost studies and the perceptions of second language educators. The second stage consisted of collecting and analyzing the data and determining the additional costs associated with each second language program.

Additional costs are defined as those which would not have been incurred had the second language program not been in existence. Three types of costs were identified: instructional costs incurred in providing classroom instruction to pupils, ancillary costs incurred in providing supplementary services to program pupils and developmental costs incurred in developing a new program. The elements comprising each cost type are:

Instructional	<u>Ancillary</u>	<u>Developmental</u>
Teacher Salaries -	Special Activities	Curriculum
Equipment	Professional Development	Assessment
Materials	Support Staff	Other
Transportation	Resource Personnel	,
Other	Supervision	

- Instructional costs are basic to all programs which have reached the implementation stage as they represent the cost of the teacher, the instructional materials necessary to present the curriculum, and the cost of transporting, where necessary, the pupils to the teacher. Certain second language program teacher costs are not classified as additional as explained later. The other elements included under instructional costs are all considered additional if they are provided specifically for a second language program without benefit to non-program pupils.
- Ancillary costs are all additional as they would not be incurred without the existence of the program. The supplementary services they represent are provided specifically for a particular program. These costs are

discretionary in that the related services are not essential in offering a program; whether or not they are provided depends on their need as perceived by the school board.

• Developmental costs are all additional as they are incurred for the development of a particular program. Their magnitude is dependent on the variety and extent of the developmental effort expended in initiating a program.

Once the cost types were identified, a questionnaire was designed to elicit information about the costs incurred by school jurisdictions operating second language programs. A draft questionnaire was reviewed by second language educators for omissions and revisions and another draft was field-tested with a large jurisdiction. Copies of the questionnaire were sent to the twenty-three school jurisdictions offering second language programs in 1978 under Section 150(1)(a) and (b) of the School Act.

Five school jurisdictions were selected for intensive study. They were chosen on the basis of the diversity of programs offered, and the varying stages of adoption and school setting which they represented. These five boards were provided with assistance as necessary in the compilation of data according to the research questions, i.e., program type, single of adoption, instructional level, and school size. Once the data and been compiled, the information was reviewed for completeness and possible areas of misinterpretation. Interviews with selected personnel from each of the five boards were arranged to provide clarification of the questionnaire items and on specific details concerning the second language programs offered.

As the calendar year 1978 encompassed portions of two school years, 1977-1978 and 1978-1979, the number of pupils and teachers reported for June, 1978 and December, 1978 were prorated to arrive at a calendar year equivalent. The pro rate numbers for 1978 were derived by assigning a weight of .67 to June and .33 to December so that full-time equivalent calculations would correspond to the financial data requested for the calendar year 1978.

As a teacher is required to instruct pupils regardless of the program in which they are enrolled, all teacher costs cannot be considered additional. The additional teacher costs are determined by calculating what it would cost to instruct all second language pupils in English, and subtracting that amount from the actual costs to instruct them in the second language. For these calculations, it has been assumed that additional English-speaking teachers would be employed at the average salary of present teachers, and that it would be necessary to maintain existing pupil/teacher ratios for English-language instruction in all school jurisdictions.

In order to calculate the additional teacher salaries and benefits for second language instruction, it was necessary to convert all second language pupils and teachers to full-time equivalents (FTE) based on the number of minutes per week of second language instruction involved, thereby ascribing to them the same full-time status as pupils and teachers in the rest of the school system. The teachers' instructional load included both instruction and preparation time utilized in a second language program. The second language program FTE pupils, teachers and their salaries were subtracted from the total system figures to arrive at regular non-second language FTEs and earnings. Pupil/teacher ratios and average teacher salaries and benefits were calculated for each of the second language programs and for regular school programs. Hypothetical marginal regular program teacher costs were then determined by assuming a transfer of all second language FTE pupils to regular programs and calculating the extra regular program teacher costs which would be required to maintain existing pupil/teacher ratios at average salaries and benefits. These hypothetical marginal regular teacher costs were deducted from the actual second language teacher costs to arrive at the additional second language teacher costs. In certain cases, this calculation resulted in negative additional second language costs, due in part to lower average teacher salaries and/or higher pupil/teacher ratios for second language programs.

As ancillary and developmental costs are incurred on a system-wide basis rather than at the school level, analysis by school size did not apply. Ancillary costs associated with staff providing services to more than one

program were allocated to a specific program on the basis of time estimates by each school board.

FINDINGS

Table 19 presents a summary of the programs offered. Three of the five boards subject to intensive study (one urban and two rural) offered French programs only while two urban boards also offered Ukrainian and German programs. With one exception, all five boards offered CORE FRENCH at all instructional levels and IMMERSION FRENCH at the elementary level. At two boards (one rural and one urban), all French programs were in a maintenance stage; at the other three boards, the programs providing increasing instructional time in French (EXTENDED and IMMERSION) were in an implementation stage. Both elementary BILINGUAL UKRAINIAN programs were in an implementation stage. With one exception, all CORE programs were in a maintenance stage.

The number of full-time equivalent pupils in any particular second language program ranged from a low of .04 per cent of all students at one board to a high of 27.32 per cent. All FTE French pupils combined for any jurisdiction ranged from 2.22 to 33.57 per cent at the elementary level, 1.93 to 25.69 per cent at the junior high level and 2.47 to 11.03 per cent at the senior high level.

IMMERSION		S.a.	•
French	5	80 ₃	1
rrenen	•	9	•

The staffing patterns for each program revealed few consistencies across programs or instructional levels. Two boards (one urban and one rural) had generally fewer pupils per teacher across instructional levels for both CORE and IMMERSION FRENCH programs.

Instructional Costs - ALL CORE FRENCH programs at the elementary level had negative additional teacher costs, i.e., cost savings, indicating that the cost of the teachers was less than the potential cost of replacing them with regular teachers. This finding held for all elementary French programs in an implementation stage. However, all other elementary programs (EXTENDED, BILINGUAL and IMMERSION) in a maintenance stage incurred additional costs for teacher salaries and benefits. At the junior high level, two of the five CORE FRENCH programs had negative costs as did one of the three IMMERSION FRENCH programs; all other French programs had additional costs for teachers.

When additional teacher costs and other instructional costs were combined, only three programs with negative additional teacher costs had overall additional costs: a rural junior high CORE FRENCH program, the urban elementary EXTENDED FRENCH program, and a rural elementary IMMERSION FRENCH program.

Examination of the instructional costs incurred for equipment, materials, transportation and other related expenditures revealed some consistencies stages and instructional levels. In general, across programs, progressively less was spent by all boards on these items advancing from the elementary to the secondary levels, as the result of a decreasing pattern in the FTE pupils. Expenditures by the largest board for junior high (implementation) and senior high (maintenance) CORE FRENCH programs reflected increasing costs. All programs in an implementation stage inc red considerable additional expenditures. The urban board providing an a ticulated IMMERSION FRENCH program (maintenance) instructional levels expended substantial additional funds for instructional purposes; the single most costly item for this program at all instructional levels was transportation. While the other two urban boards

also provided transportation for the IMMERSION FRENCH program, the total amount spent was considerably less due to the fewer number of pupils involved. While the rural boards also provided transportation, this was not an additional cost to the French program as pupils required this service regardless of language of instruction.

System Costs - While instructional costs (representing the cost of providing pupils with basic classroom instruction which requires a teacher and may include instructional materials and transportation) are incurred in individual achools, some costs are incurred for programs on a system-wide basis and depend on board policy and perceived program needs. If these additional services are provided, additional funds are allocated to specific programs. Both ancillary and developmental costs are system costs which can be attributed to a particular instructional level but not to a specific school. Ancillary costs are incurred for special activities, professional development. support staff. resource personnel supervision; developmental costs are incurred for curriculum, assessment and other related expenditures.

Analysis of ancillary costs revealed a general trend across programs to spend more at the elementary than at either secondary level. Furthermore, substantially more financial support was provided to the IMMERSION FRENCH and BILINGUAL (FRENCH and UKRAINIAN) programs than to other programs; this was due largely to the support staff provided for these programs at the elementary level. All boards provided some consultative staff for the second language program. For CORE programs (maintenance) this was often the only ancillary service provided. Programs in an implementation stage tended to incur more ancillary costs; in addition to support staff and supervision, boards provided professional development activities for teachers and special activities for pupits. The fully articulated IMMERSION FRENCH program (maintenance) also received considerable financial support across all instructional levels.

Four boards reported developmental costs; for most programs these costs were incurred for the acquisition of curricular materials. Staff from

three boards also developed materials, primarily for programs in an implementation stage. Generally, more expenditures were incurred for programs in the implementation that the maintenance stage; this was anticipated as programs are often developed and implemented concurrently.

e boards in the sample in 1978. When all program variations were added together the collective additional cost for the five boards was \$1,412,718.

CONCLUSIONS AND RECOMMENDATIONS

Given the disparity among the five boards with respect to the areas under investigation in the present study, few conclusions can be drawn; the findings, however, uncovered issues which merit further investigation.

The single most expensive item of providing instruction to pupils was the cost of the teacher. Whether or not the cost of teachers in a specific second language program was additional depended primarily on differences between the program examined and the regular system with respect to the staffing pattern (pupils/teacher) and average salaries. If the staffing patterns and average salaries were identical, the second language teacher costs would be the same as for the regular programs. Furthermore, location of the program also affected teacher costs; while new programs can be physically located to ensure optimal staff deployment, existing programs in established schools are subject to the vagaries of pupil enrolment. Examining teacher costs in depth by systematically manipulating the variables could provide meaningful data on which to project expenditures.

• INVESTIGATE THE EFFECTS ON TEACHER COSTS OF VARYING PUPIL ENROLMENT, TEACHER DEPLOYMENT AND AVERAGE TEACHER SALARIES.

Second language programs do not exist in isolation. Whi this study acknowledged the importance of location by comparing teacher costs within schools of comparable size (which often meant the same school), the impact of the program's existence on a school was not investigated. The educational milieu of a school depends on many factors, among them the number of other elective programs which might be offered, entailing an element of opportunity cost. Information of this type is especially important for programs which provide increasing instructional time in the second language (EXTENDED, BILINGUAL and IMMERSION) because of the extensive resources used. Research into the impact of second language programs on a school would complement the findings of this study.

• INVESTIGATE THE IMPACT OF SECOND LANGUAGE PROGRAMS ON THE ORGANIZATION OF SCHOOLS IN TERMS OF THE USE OF PHYSICAL AND HUMAN RESOURCES EXPENDED AND OPPORTUNITY COST.

with respect to instructional time, the EXTENDED, BILINGUAL and IMMERSION programs provide a higher degree of instructional contact with school subjects in the second language. This requires instructional materials in the second language of subject matter which would otherwise be presented in English. This duplication of materials then becomes an additional cost to the specific second language program. As the programs in an implementation stage generally increase by one grade each year, the potential annual additional cost for instructional materials can only be surmised. Evidence from the study concerning the fully articulated BILINGUAL and IMMERSION FRENCH programs suggest that these additional costs become substantial.

Moreover, the growth of programs, by virtue of the increasing number of pupils involved, may necessitate the establishment of language centres. Program accessibility, involving costs of transportation, then becomes a major factor. The findings of the rudy indicated the extent of the additional costs resulting from organizational differences between the alternative second language programs and the regular system during 1978. Replicating the study in future years would provide comparative data as programs expand and move from an implementation to a maintenance stage.

REPLICATE THE STUDY IN FUTURE YEARS

Arising from the diversity among boards with respect to the variety and extent of ancillary services provided is the question of their benefit to the pupils, i.e., do pupils receiving more services enjoy a better education? This study did not address the question of the quality of education provided by the alternative second language programs. While costs and quality cannot be equated, the question remains concerning the value of ancillary services. It is recommended, therefore, that Alberta Education establish a mech mism to address this issue.

• ESTABLISH A MECHANISM TO EXAMINE THE REQUIREMENTS FOR PROVIDING A SOUND EDUCATION IN A SECOND LANGUAGE.

Subsequent to the above, the dollar costs could be estimated. Should consensus exist among concerned parties with respect to the necessary components, the cost of "model" second language program variations could be projected. This would provide boards with alternatives which have dollar

figures attached permitting them to make choices which would correspond to amounts they have to spend.

• INVESTIGATE THE COSTS OF PROVIDING HYPOTHETICAL "MODEL" SECOND LANGUAGE PROGRAM ALTERNATIVES.

The present investigation determined a total additional cost, comprised of instructional, ancillary and developmental costs, for the second language programs offered by only five boards in 1978. Subsequent program expansion and maturation have undoubtedly increased these amounts, not only for the sample boards, but for others offering second language programs in Alberta as well.

Determination of an annual component of second language program costs required diligent effort as the accounting and record-keeping procedures maintained by some jurisdictions were inadequate in providing the data required in this investigation. Alberta school jurisdictions are legally required to maintain financial data to the functional level only, which for purposes of this study were not sufficiently detailed. Consequently, considerable manual effort was required to assign costs to specific second language programs. All jurisdictions in the sample were able to provide data at the sub-program level (French, German, Ukrainian). The element level, providing detail about specific program variations (CORE, EXTENDED, BILINGUAL, IMMERSION) was rarely employed. It was, therefore, necessary to examine the records of individual teachers in individual schools in order to attribute the instructional costs to a specific program.

Maintaining both financial and program data relevant to specific program alternatives would have considerably simplified collection of the data. For subsequent studies of this nature, school jurisdictions should be alerted in advance of the type of data required so that the task can be more readily accomplished. For programs offering increased instructional contact in the second language it is important that the cost of subject matter taught in either English or the second language be accurately attributed. This would permit better decisions about costs and, therefore, program planning. In this manner, all processes of the Planning, Programming, Budgeting Evaluation System (PPBES) would be possible.

• ENCOURAGE SCHOOL JURISDICTIONS TO MAINTAIN ACCOUNT IG RECORDS TO THE ELEMENT LEVEL SO THAT EXPENDITURES ARE ATTRIBUTED TO SPECIFIC PROGRAMS.

If more detailed accounting records were maintained province-wide, determination of the comprehensive additional cost of second language instruction would be possible. Such analysis would permit a broader estimation of actual costs over an extended period of time (three or five years), which would reduce variations among boards which may have occurred during one year.

• INVESTIGATE THE COMPREHENSIVE ADDITIONAL COST OF SECOND LANGUAGE PROGRAMS OVER A THREE OR FIVE YEAR PERIOD.

It is the boards themselves which determine the costs of specific programs. The following quotation succinctly summarizes the conclusions of the present investigation.

Costs are not intrinsic to the program or curriculum, but depend on choices made about the organization of people and materials which deliver the program to the students and about the buildings and support services which provide space and the amenities which facilitate delivery of the program message.

MacNab and Unitt(1978:284-285)

APPENDIX A

QUESTIONNAIRE

COSTS OF SECOND LANGUAGE INSTRUCTION

QUESTIONNAIRE

This questionnaire is designed to elicit information about the costs Alberta school jurisdictions incur when implementing instruction in a second language. Please provide cost data for the calendar year January 1 to December 31, 1978. Please clarify any information which you feel may be misinterpreted or not thereof y understood. You may wish to append a detailed explanation of the cost figures for your jurisdiction.

The questionnaire is divided into four major sections:

- A Total School Jurisdiction Information
- B Second Language Instruction
- C Second Language Support Staff
- D Second Language Program Davelopment

The questions related to costs follow the first and second level object codes of the PAB classification system. The major categories are:

- 1) Earnings salaries and benefits
- 2) Supplies and Materials
- Equipment
- 4) Transportation

The following definitions apply in this quantionnaire:

PROGRAM TYPES

1) CORE - a program in which the second language is taught as a subject for a period of time comparable to other school subjects.

- 2) EXTENDED a program in which the second language is taught as a subject and in addition one other subject (art, music, social studies, etc.) is taught in the second language.
- 3) BILINGUAL a program in which the second language is taught as a subject and two or more other subjects are taught in the second language so that students are instructed in the second language up to a maximum of 50% of the time.
- 4) IMMERSION a program in which the students are instructed in the second language over 50% of the time.

PROGRAM STAGES

- DEVELOFYENT the earliest stage in which a program is developed, curricular and assessment materials are acquired and examined, and additional materials are developed and/or revised to meet the needs of the program.
- 2) IMPLEMENTATION the next stage in which the program materials which have been developed are field-tested on a system-wide basis by the teachers in the schools.
- 3) MAINTENANCE the final stage in which the program is operating in the schools and requires only minimal assistance to enable it to continue operation.

SCHOOL SIZE

- 1) SMALL a school which has for than 200 students.
- 2) MEDIUM a school which has 200 to 599 students
- 3) Linear a school which has more than 600 students.

INSTRUCTIONAL LEVEL

- 1) ELEMENTARY grades 1 to 6.
- 2) JUNIOR HIGH SCHOOL grades 7 to 9.
- 3) SENIOR HIGH SCHOOL grades 10 to 12.
